

Press Release

Airbus Helicopters offers H145 with Alternate Gross Weight of 3,800 kg

Donauworth, 28 June 2017 – The optional increase of the Alternate Gross Weight (AGW) allows H145 operators to take off with up to 100 kg more useful load. It brings additional benefit especially for law enforcement, para-public or military missions offering the possibility to carry for example more fuel, mission equipment or passengers.

Axel Humpert, Airbus Helicopters Head of H145 Programme says: “Since the entry-in-service of the new H145 in 2014 Airbus Helicopters has continued its efforts to improve the power and performance of the aircraft according to our customers’ needs. The new Alternate Gross Weight of 3,800 kg is a significant increase for a light-twin helicopter and offers real added value for H145 operators.”

The AGW of 3,800 kg is linked to a temporary restricted flight envelope until 100 kg of fuel are consumed after approximately 20 minutes. It requires a logging of AGW times with a slight impact on Direct Maintenance Costs. The AGW does not apply to Cat. A flights where performance with one engine inoperative is relevant.

The H145 is the most advanced member of Airbus Helicopters’ multi-purpose twin-engine category. The EC145/H145 family combines a total of over four million flight hours and more than 1,100 rotorcraft are in service worldwide. Thanks to its compact size, the large and flexible cabin reconfiguration, powerful engines and the latest Helionix avionics suite with four-axis-autopilot the H145 is the aircraft of choice for a great variety of missions.

About Airbus

Airbus is a global leader in aeronautics, space and related services. In 2016, it generated revenues of € 67 billion and employed a workforce of around 134,000. Airbus offers the most comprehensive range of passenger airliners from 100 to more than 600 seats. Airbus is also a European leader providing tanker, combat, transport and mission aircraft, as well as Europe’s number one space enterprise and the world’s second largest space business. In helicopters, Airbus provides the most efficient civil and military rotorcraft solutions worldwide.
