German Federal Aviation Office certifies world's first H145 full flight simulator at Airbus Helicopters

Donauwörth, 13 September 2017 – The H145 simulator at the Airbus Helicopters Training Academy in Germany has been awarded level D status by the German Federal Aviation Office – the highest possible certification for a full flight simulator. With such airworthiness authority approval, more training hours accumulated by pilots in the full flight simulator are now authorized to be logged as actual flight hours.

The simulator provides national and international customers with a wide range of training opportunities, in particular for missions under extreme flight conditions and for practising various emergency procedures. Not only is it the world's first certified full flight simulator for the H145, but it is also the first helicopter simulator in Germany to receive EASA level D certification. Level D helicopter simulators must meet a number of criteria, including the ability to move in six directions, to provide a field of view of at least 180°, to work with realistic acoustic and visual simulations, and to perform several special motion effects. The new simulator in Donauwörth fulfils and partially exceeds the requirements.

An additional important feature of the new simulator is that it can accommodate developments that are still on the horizon: the simulator cockpit developed and constructed in-house by Airbus Helicopters can be easily rolled on and off the simulator, allowing it to be replaced with other configurations. This guarantees maximum flexibility with regards to future helicopter variants or configurations.

The H145 simulator is suitable for pilots' initial training and refresher courses, for specific instruction on emergency procedures, for flights according to Instrument Flight Rules (IFR), in offshore conditions and at night (with night vision goggles), as well as for Cat. A operations. Each year, more than 400 pilots pass through the Training Academy in Donauwörth, completing over 1,500 flight hours in the process.

"Thanks to the world's first H145 simulator, we can provide our customers with an excellent training environment," explains Charles Hebeke, Head of Airbus Helicopters Training Centres in Germany. "This is a further step we are taking together with our customers towards guaranteeing maximum flight safety when operating our helicopters."

In order to make the H145 flight simulation as realistic as possible, the simulator is provided with an extensive H145 OEM level D data package from Airbus Helicopters and its suppliers. This includes H145 software, an original cockpit and further H145 parts, all of which guarantee the fully simulated and realistic functionality of the helicopter, its engines and the Helionix avionics suite. Furthermore, the simulator has been tested and validated by the design experts, flight test engineers and test pilots who were involved in the development of the H145. It has been built in cooperation with Indra Systemas, a Spanish flight simulator manufacturer.

About Airbus

Airbus is a global leader in aeronautics, space and related services. In 2016, it generated revenues of € 67 billion and employed a workforce of around 134,000. Airbus offers the most comprehensive range of passenger airliners from 100 to more than 600 seats. Airbus is also a European leader providing tanker, combat, transport and mission aircraft, and is one of the world's leading space companies. In helicopters, Airbus provides the most efficient civil and military rotorcraft solutions worldwide.
